Web Service: Program Flow

Steven Bucksbaum, March 15, 2011

| SOA Client | Exposed Interface | Business Process | Data Access | Data Source |

Client calls the web service interface

Step 1: Verify the caller

Call database for table of business partners

Process data, caller verified

If verification of caller fails, return to client

Caller verified, continue

Step 2: Process Action Verb request

Step 3: Process request for data

Call database for data to process partner's requst

Step 4: Returned XML string of data to client

Process data returned from database, add business logic

Requested data returned to client
